**Subject:** Coordinating Test Pumping and Intermountain Lab Schedules

This message is only applicable to those of you that use Intermountain Lab in Farmington. If you are planning to collect water samples for organic analyses, in conjunction with test pumping a well, you will have to coordinate the test pumping to make sure that you can deliver the samples to the Intermountain Lab before 3:00PM on Thursday. Intermountain sends the organic samples to another lab and they have to have the samples packed and ready for UPS pick up by 4:00PM.
